New product

Let us introduce our novelty suitable for kindergarten playrooms. Children will learn by play how to use modern technologies. As if waving a magic wand, MAGIC BOX will turn the kindergarten floor into an enchanting interactive world for young preschoolers with a work surface of 200 x 125 cm! The mobile box called MAGIC BOX contains an interactive projecting device, a small but high-performance computer with Wi-Fi and sound! On top of all that, you will receive a great projection surface!

Plug and play

It is a simple mobile projection device with no need for installation. Just plug in the game set, switch it on and you can start projecting on the soft projection pad. You can project anything that is usually projected on a projection screen or board. As our projections for children take place in their most natural playing environment, that is on the floor, even experienced kindergarten teachers state that this is the best form of projection for the youngest children! The computer is controlled by a simple electronic pen or by a keyboard.

Interesting content for kids

Due to MAGIC BOX even very young children can participate in SW games, colouring pictures, puzzles or other educational activities while standing, kneeling or laying directly on the projection surface. The interactive character of these programs contribute noticeably to faster development of intellectual capacity of children as well as of their motoric skills. The projection surface is very comfortable and pleasant for children. Moreover, the entire projection surface can serve as a puzzle, which the children can try to put together before you start using it...
